

Submitting your video: shrink it with HandBrake

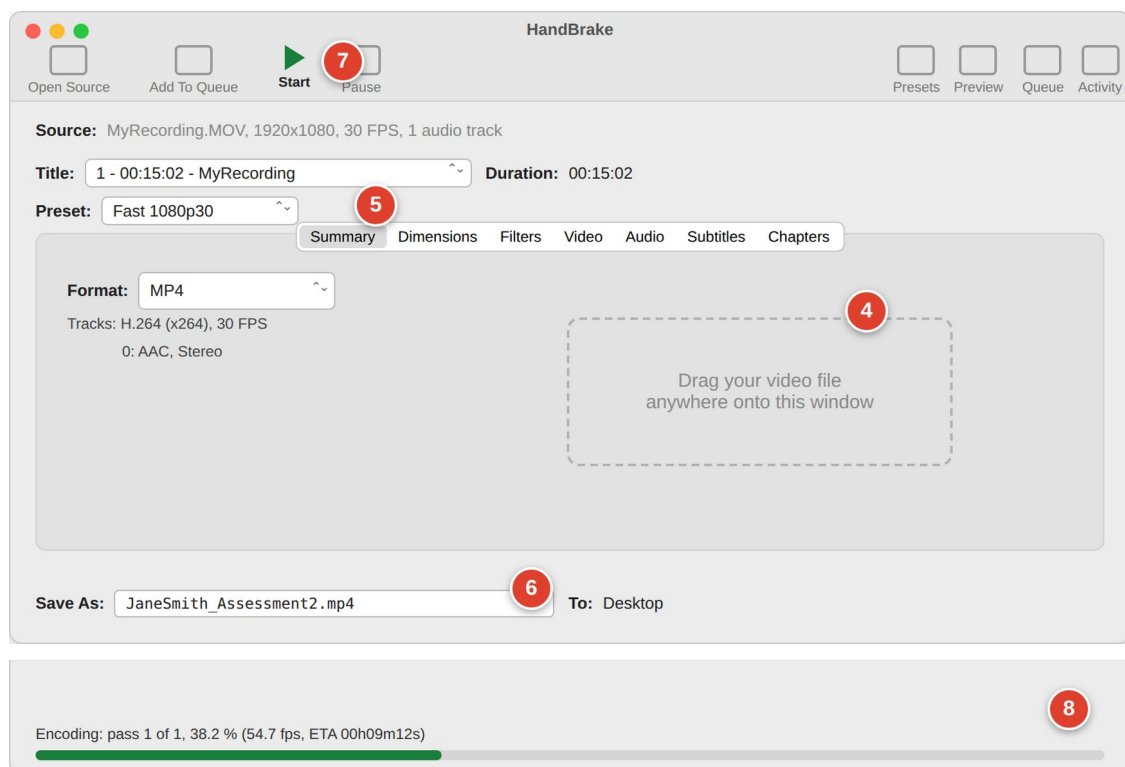

Videos from a phone or camera are too big to upload. HandBrake is a free program that makes a much smaller copy that plays anywhere. Leave every setting on its default.

Install HandBrake (once)

1. On a Mac or Windows computer go to **handbrake.fr** and click **Download**.
2. **Mac:** open the downloaded file and drag HandBrake into Applications. **Windows:** run the installer and accept everything it asks, including the .NET Runtime.
3. Open HandBrake. If your computer warns you, choose **Open / Run anyway** (Mac: right-click the app, choose Open).

Convert your video

4. Copy your video onto the computer (AirDrop, cable, or download from Google Photos / iCloud), then **drag the file onto the HandBrake window**.
5. Check the Preset says **Fast 1080p30**. Change nothing else.
6. In **Save As** type your name and the assignment, e.g. JaneSmith_Assessment2.mp4. Keep the .mp4 ending.
7. Click the green **Start** button.
8. Wait for the progress bar to finish (10 to 30 minutes). Keep the laptop plugged in and awake. Then double-click the new file on your Desktop and check it plays with sound.

Upload it

9. Open the upload link your tutor sent you and upload the **new MP4** (not the original). Wait until it reaches 100%.
10. Keep your original recording until your tutor confirms it has arrived.

Problems? If HandBrake will not open your video or you get stuck, email your tutor before the due date.
